

MD AASIF ANSARI

DATA SCIENTIST | Power BI • Python • Machine Learning

ashifansari19999@gmail.com • +91 7783870645 • India • [linkedin.com/in/md-aasif-ansari-94a587306](https://www.linkedin.com/in/md-aasif-ansari-94a587306) • github.com/Aasu15-ops

PROFESSIONAL SUMMARY

Results-driven Data Scientist with 1+ year of hands-on experience in data visualization, business intelligence, and machine learning. Proficient in building interactive Power BI dashboards, stakeholder reporting, and exploratory data analysis to deliver actionable insights. Skilled at data governance, regression analysis, and transforming complex datasets into clear visual stories that drive strategic, data-backed decisions.

EDUCATION & CERTIFICATIONS

B.Tech — Jharkhand University of Technology, Ranchi

Mar 2021 – Aug 2024

Data Science Certification — Uncodemy Pvt. Ltd.

Nov 2024 – Aug 2025

10-month intensive program covering Data Analysis, Machine Learning, Statistical Modeling, Python for Data Science, SQL, Power BI, and Business Intelligence.

PROFESSIONAL EXPERIENCE

Data Scientist Intern — GvCloud Secure Pvt. Ltd., Noida

Oct 2025 – Present

- Assisted the data team in collecting, cleaning, and preprocessing datasets using Python (Pandas, NumPy) for analysis tasks.
- Performed basic exploratory data analysis (EDA) to identify trends and patterns, and shared findings with the team.
- Supported senior team members in building simple dashboards and reports in Power BI for internal use.
- Learned and applied foundational machine learning concepts on sample datasets under team guidance.

KEY PROJECTS

UPI Transaction Fraud Detection & Analysis | Python • ML • Power BI

Sep 2025 – Oct 2025

- Applied machine learning classification models (Random Forest, Logistic Regression) on 500K+ UPI transaction records to detect fraudulent patterns and anomalies with ~92% accuracy.
- Performed feature engineering and exploratory data analysis (EDA) on transaction volume, value, success rates, and user behavior to extract predictive signals.
- Built an ETL pipeline using Python (Pandas, NumPy) to clean, transform, and load raw transaction data, ensuring high-quality input for model training and reporting.
- Developed an interactive Power BI dashboard with real-time KPIs, drill-down charts, and dynamic filters to visualize fraud trends and transaction insights for stakeholders.

E-Commerce Customer Churn Prediction & Sales Analytics | Python • ML • SQL

Aug 2025 – Sep 2025

- Developed a customer churn prediction model using machine learning (XGBoost, Decision Tree) on 200K+ e-commerce records, achieving ~88% accuracy and identifying high-risk customer segments.
- Performed regression analysis and customer segmentation using Python (Scikit-learn, Pandas) to uncover sales trends, product performance patterns, and revenue growth opportunities.
- Built an end-to-end ETL pipeline with Python and SQL to automate data extraction, cleaning, and transformation — improving data consistency and reducing manual effort by ~60%.
- Designed optimized SQL data models with stored procedures and triggers, improving query efficiency by ~30% and enabling scalable business intelligence reporting via Power BI.

SKILLS & TOOLS

Visualization: Power BI (DAX, Power Query, KPIs, Drill-down), Tableau, Data Visualization, Business Intelligence

Languages & Libraries: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL

Databases: PostgreSQL, SQL Server, MySQL Workbench

Tools & Platforms: VS Code, Jupyter Notebook, Google Colab, PyCharm, Anaconda, Microsoft 365, Excel

Other: Statistics, Machine Learning, ETL Pipelines, Data Governance, A/B Testing, Regression Analysis, Stakeholder Reporting
